

## Are you interested in spending some time in sunny Arizona?

We are currently recruiting participants for a research project comparing outcomes of bimodal cochlear implant users. The study requires 2-3 days of testing in Tempe, AZ. We pay for travel, food, and lodging. You will also be paid for your participation in the research project. The evaluation consists of repeating words and sentences presented in quiet and in noise, identifying the location of sounds in space, and rating the quality of various sounds.

To be considered for participation, please sign up at the website provided below. If you are identified as an appropriate candidate, a request will be sent to the email address you provide and we will work with your schedule to find a convenient time for testing. Your participation in any study is strictly voluntary.

**About Us:** The Speech and Hearing Department of Arizona State University has 3 laboratories, 5 faculty members, and several staff and students conducting research in the area of cochlear implants. Our efforts have been described in hundreds of journal articles and presentations across the country and throughout the world. Our ideas have impacted the way scientists, clinicians, parents, and manufacturers think about cochlear implants. Our work has been awarded millions of dollars in competitive research grants and contracts. Every project begins with the goal of understanding and improving outcomes with cochlear implants.

## Sign Up!
